Art Unit: 2878

#### **DETAILED ACTION**

### Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

## **Priority**

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### Claim Objections

- 3. Claim 5 is objected to because of the following informalities: "light beam adjusting means" should read, "a light beam adjusting means". Appropriate correction is required.
- 4. Claim 6 is objected to because of the following informalities: "A photoelectric sensor" should read "The photoelectric sensor" in order to be consistent with the other dependent claims. Appropriate correction is required.

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by US 4,782,224 to Haas et al.

Art Unit: 2878

With respect to claim 1, Haas et al disclose a light projection section comprising light source (20), mirror (14), and transmitting lens (17) as a light projecting lens for collimating medium light from source (20). Serving as a deflection angle adjusting means, mirror (14) is moved by actuator knob (29) to finely adjust the optical axis deflection angle. Light reflects off of target object (44) and is received by sensor (45).

7. Claims 1 & 5-6 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,760,390 to Vezzalini et al.

Vezzalini et al disclose a system comprising of light emitter (4), sensors (11-12), lenses (7, 15), optical reception chamber (210), and optical transmission chamber (105). Actuator knob (40) is used to move the pivots (121, 221) in a direction of axis (27).

With respect to claim 1, Vezzalini et al disclose a light source (4), a light projecting lens (7), and optical transmission chamber (105) as a deflection angle adjusting means capable of adjusting the optical axis deflection angle as it moves in relation to pivot (120).

With respect to claim 5-6, Vezzalini et al disclose the device to be enclosed in housing (3). Vezzalini also disclose the knob (40) as a light beam adjusting means allowing for movement in direction of axis (27) in order to perform a distance adjustment of the light collecting point emitted from lens (7).

# Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 10. Claims 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 5,760,390 to Vezzalini et al.

Vezzalini et al describe the device as shown in the discussion of claims 1 & 5-6. With respect to claims 7-8, Vezzalini et al do not explicitly disclose the lens characteristics to be of a planar and uniform diffusion type, but such would have been obvious to one of ordinary skill in the art as such modifications would allow for even light emission so that an accurate determination of the target can be made.

With respect to claim 9, Vezzalini et al do not explicitly state that the lens holder is rotatable about an optical axis, but such would be obvious to one of ordinary skill in the art as it would increase the range over which an object can be detected.

Application/Control Number: 10/633,595

Art Unit: 2878

## Allowable Subject Matter

11. Claims 3-4 are objected to as being dependent upon a rejected base claim, but

would be allowable if rewritten in independent form including all of the limitations of the

base claim and any intervening claims.

12. The following is a statement of reasons for the indication of allowable subject

matter:

With respect to claims 3-4, the prior art of record does not disclose nor suggest

the use of a plane-parallel glass plate.

#### Conclusion

13. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Patrick J. Lee whose telephone number is (571) 272-

2440. The examiner can normally be reached on Monday through Friday, 8:00 am to

5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, David P. Porta can be reached on (571) 272-2444. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.
